## MA Computer Settings for grandMA2

MA consoles have specially configured hardware and a specially adapted Linux operating system to run the MA software trouble-free and under best conditions.

MA software will also run on a standard computer with Windows operating system without problems, if different rules and settings are observed.

- 1) Please use a computer with hardware specification comparable to a grandMA2 console. MA recommends a 64bit operating system with 8GB main memory and a graphic card with at least 1GB dedicated video memory (see *System Requirements grandMA2 onPC*).
- 2) Please run a Windows update to keep your computer up to date with the latest version of the operating system.
- 3) Please check the Device Manager, if all devices are detected correctly and if all devices have an up to date driver version.
- 4) You must be logged in as administrator or as user with administrator rights.
- 5) Install and test the MA software and check the computer for trouble-free operation.

MA Lighting International does not assume liability for these recommended settings. The user is responsible for his own computer.
