IT network

The MA system components use an existing IT network that offers monitoring, management, availability etc. as a communication backbone. The connections between the direction and studios are configured as trunks and comprise all MA groups.

This has a huge benefit that the IT network fulfills universal specifications that are only set-up once. In parallel, the various lighting technologies can set-up their own devices completely flexibly, and MA Network Switches can be added and configured if needed.

Studio A

MA VPU light
Pixelmapping
MA 8Port Node
Moving Lights, Dimmer
LED-Bars
grandMA2 Light
MA Network Switch
Main Console
Backup

Direction 1

Studio B

MA 4Port Node
Moving Lights, Dimmer
LED Cyclorama

MA Network Switch

Connection for the LED set illumination via Art Net

Direction 2
